GDP at Market Prices (1981 to 2015) 7
Compensation of Employees by Industry (1981 to 2015) 10
Household Current Account (1981 to 2015) 13
Household Property Income (1981 to 2015) 19

Section 2: Expenditure Account 25
Current Dollar (Nominal)
GDP at Market Prices (1981 to 2015) 25
Final Consumption of Households (1981 to 2015) 31
Gross Fixed Capital Formation by Industry (1961 to 2015) 43

Chained (2007) Dollar (Real)
GDP at Market Prices (1981 to 2015) 48
Contribution to Per Cent Change (1982 to 2015) 54
Final Consumption of Households (1981 to 2015) 57
Gross Fixed Capital Formation by Industry (1961 to 2015) 69

Section 3: Output Account (at Basic Prices) 74
Current Dollar (Nominal)
GDP by Industry (2007 to 2013) 74
GDP by Census Metropolitan Area (2009 to 2013) 76

Chained (2007) Dollar (Real)
GDP by Industry (1997 to 2015) 77

INTRODUCTION AND OVERVIEW

Introduction

The Saskatchewan Provincial Economic Accounts (SPEA) provide the principal estimates of aggregate economic activity in Saskatchewan. The main source of data is the Provincial and Territorial Economic Accounts (PTEA) produced by Statistics Canada. Revised editions of the SPEA are produced following the availability of substantial new data.

Revisions in the February 2017 Edition

The February 2017 Edition of the SPEA incorporates Statistics Canada's revisions to Saskatchewan's macroeconomic data released up to the end of January 2017. These revisions reflect revised estimates of economic activity for 2013 and 2014 and new estimates for 2015. All estimates incorporate the new 2013 provincial and territorial supply and use table benchmarks.

In addition to these revisions, this release includes a new data series containing estimates of economic activity by Census Metropolitan Area (CMA) from 2009 to 2013. These estimates provide an avenue to evaluate the relative importance and performance of Saskatchewan CMAs.

This report is published in two versions, a print-friendly PDF and an Excel spreadsheet for ease of data accessibility and they are both are available at http://stats.gov.sk.ca/pea. Readers should note that the Saskatchewan Bureau of Statistics' website will be moving to the www.saskatchewan.ca domain in the coming months.

Overview and Highlights of 2015

Current Dollar (Nominal) GDP

In 2015, Saskatchewan's nominal GDP at market prices decreased by $4.8 billion (5.7 per cent) to $79.4 billion.

The $4.8 billion decline in nominal GDP can largely be attributed to a decline in oil prices during 2015. The fall in oil prices directly affected the value of exports, which fell by $5.1 billion (9.1 per cent). Lower oil prices also had indirect effects throughout the economy.

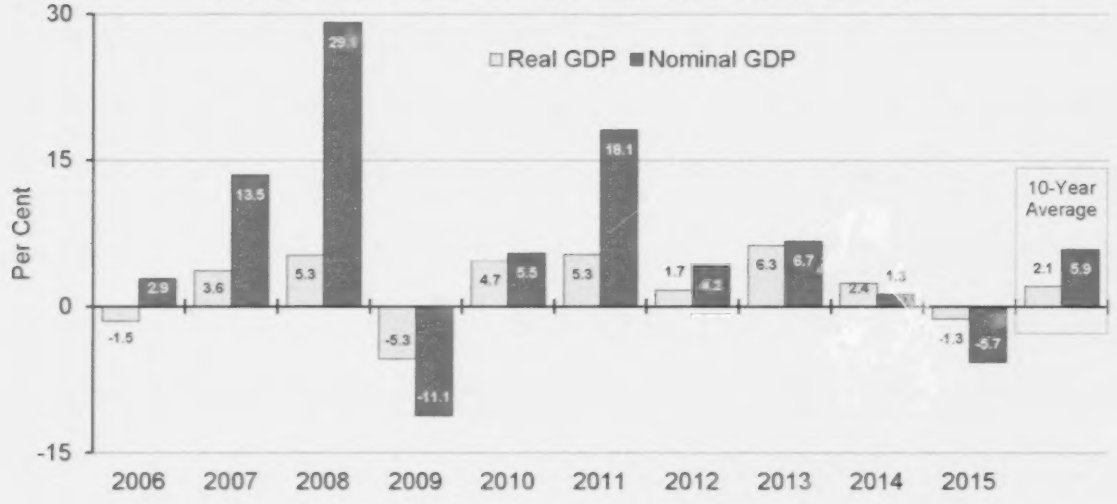
In the Income Account, the Net Operating Surplus of Corporations (profits) declined $7.6 billion (34.8 per cent).

Primary Household Income rose by $1.7 billion (3.9 per cent) in 2015. Primary Household Income comes from three sources: Compensation of Employees, or the value produced by labour; Net Property Income, or the value produced by capital; and Net Mixed Income, or the value produced in industries in which the labour and capital components cannot be separated. Despite the decline in the price of oil and the shrinking economy overall Compensation of Employees continued to increase, rising $0.6 billion (2.0 per cent) in 2015. Net Mixed Income increased $0.9 billion (13.0 per cent), mostly from the agricultural sector.

After factoring out transfers to governments, corporations, and non-profit institutions, Household Disposable Income increased $1.8 billion (5.2 per cent) in 2015 after rising 0.5 per cent in 2014.

In the Expenditure Account, Gross Fixed Capital Formation (the acquisition of productive assets such as pipelines, factories, machinery, software and houses) declined by $4.0 billion (14.8 per cent) in 2015 largely because low oil prices reduced capital formation in the Mining and Oil and Gas Extraction industry by $3.9 billion (32.5 per cent).

Real and Nominal GDP Growth Rates - 2006 to 2015



Chained 2007 Dollar (Real) GDP

In 2015, Saskatchewan's real GDP at market prices on an Expenditure Account basis decreased by 1.3 per cent. Major contributions to this change came from a decline in Imports (+6.1 percentage points), which was more than offset by a decline in Gross Fixed Capital Formation (-5.7 percentage points) and all other net contributions (-1.7 percentage points).

The reduction in GFCF also contributed to a 10.3 per cent reduction in Imports. As a small open economy, Saskatchewan imports a significant portion of its capital goods. Normally Saskatchewan imports around two-thirds of GDP, meaning that a decline in domestic demand has an effect on producers outside the province as well as producers within the province.

On an Output (by Industry) Account basis at basic prices, real GDP decreased by 1.3 per cent in 2015. The decline was largely the result of a 19.0 per cent contraction in the Construction industry, reflecting the decline in GFCF in the Expenditure Account as capital formation and construction are interrelated.

Basic Concepts of the Economic Accounts

Economic Accounting Standards

Economic accounts are a set of statistical statements that provide aggregate perspectives and estimates of productive economic activity. They translate statistics and information related to economic activity such as income, expenditure and production into a consistent framework based on internationally accepted economic concepts and principles.

The international standard for economic accounting is the System of National Accounts (SNA). It was developed by the United Nations in 1947 and has gone through periodic revisions to accommodate changes in the world's economic environment and statistical methods. The current version is the System of National Accounts 2008 (SNA2008). It is developed, produced and released jointly by the United Nations, the European Commission, the Organization for Economic Co-operation and Development, the International Monetary Fund and the World Bank Group. The 2008 SNA is an update of the 1993 SNA.

Canadian System of National Accounts

The Canadian System of National Accounts (CSNA) reflects the international standards embodied in the SNA and is developed, maintained and disseminated by Statistics Canada. It undergoes regular revisions to incorporate new information as well as periodic changes in international standards. Statistics Canada started releasing revisions to the CSNA in October 2012 (CSNA2012) that incorporated changes resulting from the adoption of the SNA2008 framework. The comprehensive revision of provincial economic accounts released in late 2015 was a continuation of this process.

Saskatchewan Provincial Economic Accounts

Like the SNA and CSNA, the Saskatchewan Provincial Economic Accounts (SPEA) is a set of statistical statements that provide aggregated perspectives of productive economic activity that reflect international standards, but with a focus on Saskatchewan.

The statements are based on a subset of the CSNA produced by Statistics Canada and provide measures of Gross Domestic Product (GDP), its principal components, and related economic information.

Gross Domestic Product

Gross Domestic Product is the most common measure of aggregate productive economic activity. It is the total amount of productive economic activity occurring within a region during a given period of time and is expressed in currency units. At a national level in Canada, it is measured on monthly and annual bases. For Canadian provinces, it is currently measured on an annual, calendar-year basis and is expressed in terms of Canadian dollars.

Nominal and Real GDP

GDP can be calculated in nominal (current dollar) or real (chained dollar) terms. In concept, nominal GDP is a measure of value and real GDP is a measure of volume. The difference between the two is in the price component of the GDP calculation.

Nominal GDP is the dollar value of economic activity in a given year as measured in that year. As such, it captures the levels of both prices and quantities of goods and services in a given year. Nominal GDP is a useful metric for relative comparisons of value at a point in time or changes in the value of component shares of GDP over time.

Real GDP is expressed in terms of dollars, but the effects of changes in prices over time are removed. As such, real GDP is a statistical aggregate intended to reveal the volume or quantity of economic activity. Real GDP is a useful metric for changes in the volume or quantity of economic activity over time.

Two aspects of real GDP are noteworthy. First, the components of real GDP are not additive: the sum of real GDP components does not equal total real GDP. This is due to the chain Fisher method used to calculate real GDP. Second, there is no real GDP calculation for the income account. This is because the components of income-based GDP cannot be separated into price and quantity terms.

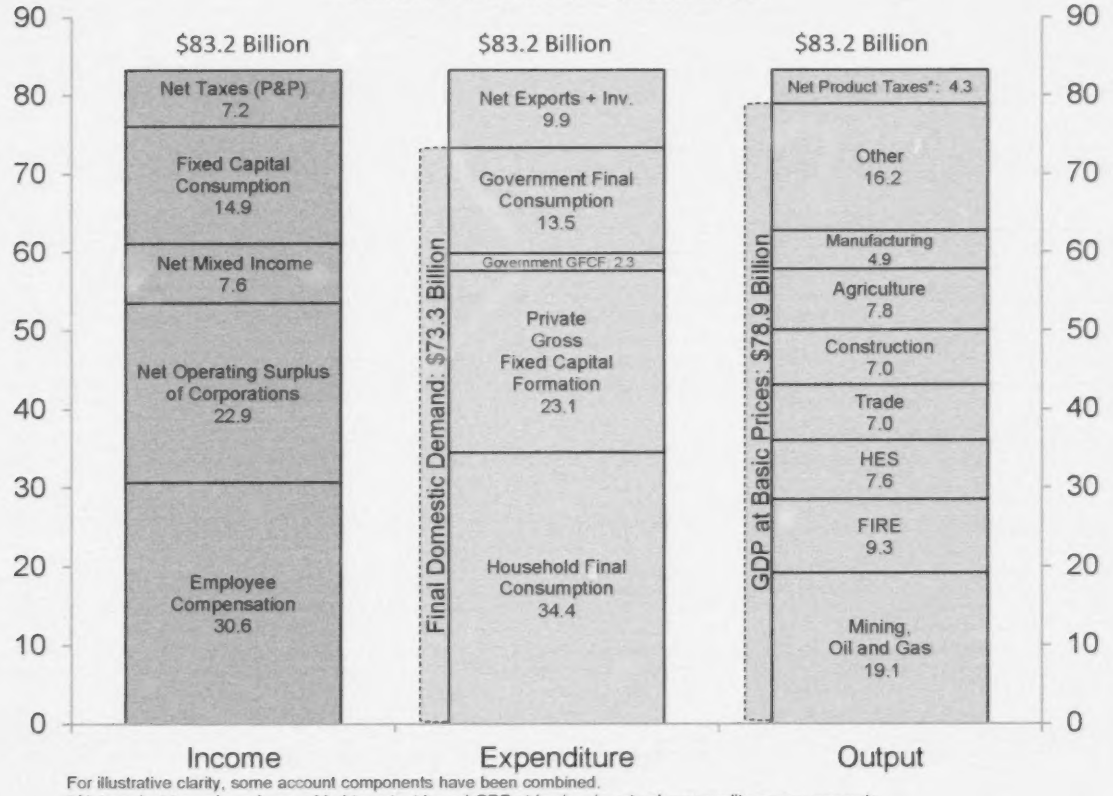
GDP Perspectives

The principal CSNA accounts reflected in the Saskatchewan PEA are the Input-Output (IO) accounts and the Income and Expenditure Accounts (IEA). Collectively, these accounts provide three perspectives or approaches to calculating GDP.

- The Income Account or income approach to calculating GDP is the sum of incomes generated in the domestic production process.
- The Expenditure Account or expenditure approach to calculating GDP is the sum of the domestic expenditures on final goods and services.
- The Output (Value Added by Industry) Account is the sum of the value added by each industry in the domestic production process.

While each of these approaches offers a different perspective on GDP, they are conceptually equal in total value.

THREE PERSPECTIVES OF SASKATCHEWAN GDP
INCOME, EXPENDITURE, OUTPUT
SASKATCHEWAN 2013 NOMINAL GDP



For illustrative clarity, some account components have been combined.
* Net product taxes have been added to output-based GDP at basic prices to show equality across accounts.
